

PROJECT SOLUTIONS

The Eclipse: Emergency power response

When faced with a power failure or an emergency power situation, utilities need to respond rapidly.

In Australia, Ampcontrol, an industrial manufacturer supplying electrical packages to the power, energy and mining sectors, offer a turnkey solution - a trailer mounted mobile substation - utilising the Eclipse from Hawker Siddeley Switchgear Australia.

The Solution

This trailer mounted substation solution offers a customised and rapid solution, which can be driven to the site of a substation failure to rapidly restore power.

Specifying the Eclipse for the 11kV side, two such trailer-mounted substations have been delivered to Energy Australia, Australia's largest distribution utility.

By creating a medium to long term solution for new or augmented substations, while still maintaining the integrity and benefits of the structural and electrical design, this mobile substation concept has proven to be an ideal alternative to conventional fixed substation techniques.

Complete Customer Satisfaction

We continue to work alongside world wide partners and third parties in developing innovative, versatile and successful switchgear solutions.
