

PROJECT SOLUTIONS

Scottish Power Energy Networks Framework

PROJECT AT A GLANCE

Product: Eclipse

Customer: Scottish Power Energy Networks (SPEN)

Location: Central and Southern Scotland, Merseyside, North Wales

Installation: 2017 - 2020

As part of the Scottish Power group of companies, Scottish Power Energy Networks (SPEN) are responsible for delivering a safe and reliable electricity supply - 24 hours a day, every day of the year - to over 5 million households and businesses across the UK.

THE SOLUTION

Hawker Siddeley Switchgear have been awarded a 3 year switchgear framework agreement with SPEN, to supply their flagship MV Switchgear product, the Eclipse, and also provide them with an interim containerised solution.

Committed to continual network improvement, SPEN needed a proven, high-tech, extremely low maintenance switchgear solution, and HSS are proud that the Eclipse still gives the edge in today's competitive switchgear market, leading the way in superior reliability, and sustainable switchgear solutions.

Estimated to be around 100 Eclipse panels a year, over the next 3 years, the first 2 switchboards are expected to be ordered this year.

Hawker Siddeley Switchgear are proud to be one of SPEN's first choice MV switchgear solution providers, building on our successful long-standing relationship that we have enjoyed over the last 40 years.
