

## PROJECT SOLUTIONS

# Thames Water Framework

Thames Water is the UK's largest water and wastewater services company providing the essential service to 14 million customers, supplying around 2,600 million litres of tap water and removing and treating more than 4 billion litres of sewage across London and the Thames Valley every single day - more than any other UK water company.

Currently investing nearly £5billion in their network infrastructure since 2010, Thames Water are determined to be at the forefront of water industry innovation.

### The Solution

Forming part of this network infrastructure improvement programme, Thames Water have awarded Hawker Siddeley Switchgear (HSS) a five year framework agreement (with a potential to increase to 7 years) to supply HV Electrical Equipment and Related Design and Installation Services with a contract value anticipated to reach £4million.

Utilising the patented 'Fit & Forget' technology, the Eclipse offers an extremely low-maintenance, hi-tech solution. This particular solution offered by HSS is quite unique in the water industry in that the switchgear is of a fixed pattern design, whilst maintaining the superior reliability expected.

### Complete Customer Satisfaction

Having already worked closely with Thames Water in the past, HSS are looking forward to building on this successful relationship with both companies cementing their drive in being at the forefront of industry innovation.
